

# BridgePoint<sup>360</sup>™

EXTEND THE POWER OF  Microsoft Dynamics® GP

BridgePoint360 is a web-based centralized data warehouse and portal which extends Microsoft Dynamics GP by connecting multi-entity, remote sites, disparate systems and your users with a seamless end-to-end solution.

BridgePoint360 addresses the inefficiencies faced by organizations that have expanded past the limits of their current system. These limitations include the inability to integrate, aggregate and correlate disparate financial and transaction data disbursed across systems, locations and workgroups, making real-time visibility into enterprise wide performance nearly impossible. Other factors which affect the bottom line include lost productivity, data integrity and costs associated with postage, paper and printing.

BridgePoint360 enables transparency and accountability by empowering local management and staff with secure, role-based remote transaction entry without having to access your back-office Microsoft Dynamics GP system. You save money by extending the reach of your ERP solution without the need for expensive and complex user licenses while increasing credibility and efficiencies through streamlined process automation.

## CORE FEATURES & FUNCTIONS

- Web-Based Intuitive User Interface
- Customizable Role-Based Dashboard
- Location-Based Architecture
- Integration to Microsoft Dynamics GP
- Comprehensive Audit Logging
- Multi-Level Routings & Approvals
- Integrated Document Imaging
- Comprehensive Security Fabric
- Single Sign-on across Regions
- Online Help including Video Tutorials
- Secure Hosted Cloud Solution

**BridgePoint360™**

*Bridging People  
Process & Performance*

# BridgePoint360™

*Bridging People, Process & Performance*

**Payables & Receivables** – Enter location, entity or department -based transactions for vendors and customers. Attach supporting documents through remote document capture.

- Restrict approved vendors by location
- Enforce transaction approval limits with secure routings and approvals
- Reduce time, paper and postage expenses with integrated document imaging, bar-coding and batch scanning
- Comprehensive data audit logging keeps track of transaction history including user, timestamp and changed data

**Sales & Revenue Management** – BridgePoint360 becomes the point of aggregation for all location-based sales data including automated collection of point-of-sale as well as end-of-day sales entry. Each location or entity is easily configured with unique sales entry which automatically pushes transactions into Microsoft Dynamics GP.

- Intuitive location, entity or department end-of-day sales entry
- Seamless integration with back-office general ledger
- Supports location specific sales items and capture systems
- Heterogeneous point-of-sale data collection & aggregation

Approval Date	Decision	Made By
- \$999999.99	Awaiting...	
\$200.00 - \$999999.99	Awaiting...	
- \$9999.99	Awaiting...	
\$100.00 - \$9999.99	Awaiting...	

**Reporting & Analytics** – Transparency and reporting are the root of all insight and accountability. With disparate systems, comprehensive firm-wide reporting and analytics are very difficult. With all data in a single data warehouse, BridgePoint 360 makes reporting and analytics easy while enforcing user security credentials.

- Local, regional and enterprise-wide reporting and analytics with rollups and drill-down
- Transaction entry and P&L by location
- Role-based customizable dashboard with integrated business intelligence including reports, graphs and charts, business alerts, queries and notifications

**Payroll Management** – Integrate, import or manually enter location, entity or department -based payroll data for all employee or contractor types.

- Payroll and timesheet entry for exempt, hourly, contractor and non-exempt employees
- Integration with outsourced payroll providers such as ADP & Ceridian

**Banking Receipts** – Banking & Cash Receipts – Record local bank transactions including deposits and withdrawals. Enter cash, check and credit card receipts which offset customer balances in the corporate accounting system.

- Enforce withdrawal approval limits with secure routings and approvals
- Comprehensive data audit logging keeps track of bank transaction history including user, timestamp and changed data
- Accept and record local customer payments

**Budgeting & Forecasting** – Manage location-specific budgets and forecasts and report against actual financial performance. Get a real time view into company performance across departments, locations and entities.

- Comprehensive Monthly Net Operating Detail
- Ability to set estimated expenses for values not captured through integrations
- Ability to make revisions and adjustments as needed

**Journal Entry** – Provide lightweight, intuitive accounting entries from anywhere, anytime without requiring access to the corporate accounting system.

- Enter accounting journal entries in real-time
- Intuitive user interface is ideal for non-accounting users
- Restrict account codes by location, entity, department or region
